

Technical parameter :

1. This is a up-winding construction screen.
The motor retracts or release steel wires through 2 individual pulleys left and right which connected with the bottom rolling tube to operate the screen.
By retracting the steel wires, the bottom rolling tube will wind up the screen from Bottom to top.
2. The motor must be installed firmly to the ceiling without any movement.
3. The pulleys left and right must be installed firmly to the ceiling without any movement.
4. Multi-point suspension with $\Phi 5\text{mm}$ steel wire to hold the upper tube horizontally.
5. To adjust the bottom rolling tube at a level condition, technician may loosen the motor and move it left or right to adjust the level.
Make sure to tighten the motor after adjustment.
